PROFILE

Full stack developer with experience in web applications (React, Node.js, Astro, Supabase) and real-time backends. Working with Claude Code (an AI coding agent), I built the complete backend of a mobile multiplayer game for Android and iOS: binary protocol, cryptography, server-side physics and more than 80 test suites. Computer Science student at the University of Buenos Aires (UBA), with a solid foundation in algorithms and software architecture.

EXPERIENCE

Front-end Developer · Ixalab (internship) — Feb 2025 – Mar 2025

Cloud platform that calculates carbon emissions and tracks the life cycle of products to make recycling easier.

- Built reusable components and complete pages in **React**, improving navigation.
- Diagnosed and fixed front-end performance issues and bugs.

FEATURED PROJECTS

Mobile Battle Royale server · Reverse engineering — 2026 – present

Starting from nothing but the Android app of a multiplayer game, I rebuilt the complete server that runs it: login, lobby, economy and matches of up to 60 players plus bots. Built with **Claude Code** as the coding agent: I set goals and priorities, directed the research and tested every change on Android, iOS and emulator, on the local network and from another country.

- **Reverse engineering:** decrypted the game's modified Python bytecode (~1,000 modules), its binary network protocol and proprietary formats.
- **Real-time backend:** ~25,000 lines of **Python** (TCP, UDP and HTTPS) with matchmaking, physics and collisions, weapons, vehicles, map destruction and bots that navigate the terrain and fight.
- **Security:** RSA login with nonce, certificate-pinned HTTPS and validation of everything the client sends.
- **iOS without modifying the app:** the App Store version connects through a DNS over HTTPS profile (HTTP/2, Let's Encrypt) that redirects only the game's domains; login with **Discord OAuth**.
- **Android client:** 59 patches to the game code, automated APK builds and a custom voice chat engine in **Java** with a UDP relay.
- **Quality and tooling:** 83 test suites (~32,000 lines) with a simulated client; web admin panel on **SQLite** protected against CSRF.

AI automation B2B platform · Personal project — Jun 2026

- Full stack development with **Astro** and **Supabase**; data validation with **Google Gemini** (prompt engineering).
- Concurrent PDF processing engine that cut data loading time by **90%**.

Elitronic · Full stack team e-commerce (MERN) — Nov 2024 – Dec 2024

- REST API and data model with **Node.js, Express and MongoDB**; interface with **React, Redux and Tailwind**.
- Payments with **Mercado Pago**, login with **Google OAuth**, images on **Cloudinary** and emails with **Nodemailer**.

OTHER PROJECTS

Wow Bao, landing page for a real food business (React, Vite, Tailwind) · **Globe Gazers**, countries app with search and authentication (React, Node.js, PostgreSQL) · **The Bark Side**, dog breed catalog (React, Express, MongoDB).

SKILLS

Languages	JavaScript, TypeScript, Python, Java, SQL, Haskell
Frontend	React, Next.js, Astro, Redux, Vite, HTML5, CSS3, Tailwind, Bootstrap
Backend	Node.js, Express, Django, REST, JWT, OAuth, TCP/UDP sockets
Data and cloud	PostgreSQL, MongoDB, SQLite, Supabase, Cloudinary
Security	Reverse engineering, binary protocols, RSA, TLS, DNS over HTTPS
AI	Development with AI agents (Claude Code), Google Gemini, prompt engineering
Practices	Automated testing, functional programming, Scrum, Git, Linux, Jira, Confluence

EDUCATION

B.Sc. in Computer Science — 2024 – in progress
University of Buenos Aires (UBA)

Full Stack Web Developer · Soy Henry, 700 h — 2023

LANGUAGES

Spanish	Native
Portuguese	B2
English	B1 (in progress, UBA)
